

CimaFast — AI Subscription Financial Model

Summary, provisional — September 2026. Cost basis, provider stack and rate card for B4/B5. Not yet enforced in product; token counts assume **full monthly redemption** (the safe/floor case).

Provider stack

Provider	Role
fal.ai	Image & video, default/draft quality — breadth, no separate fee layer
Eden AI	Fallback only if fal.ai is down (+5.5% fee, rarely triggered)
Microsoft Foundry	Azure OpenAI GPT Image 2 — indemnified image generation, Enterprise-only
ElevenLabs	Multilingual v2/v3, direct — voice, Arabic-capable

Token economics

- **1 token = \$0.03** vendor cost — 1 standard image, or ■ sec of standard video, or 250 voice characters
- **Resale: \$0.06/token** → **50% gross margin** (primary rate card, below)
- Indemnified image (Foundry): **2 tokens** medium quality / **7 tokens** high quality — same \$0.06/token resale rate

What tokens produce

Enterprise Standard example (8,300 tokens): All-images: 8,300 · All-video (5-sec clips): 553 · Typical mix (60% img / 30% video / 10% voice): ~4,980 images + 166 clips + ~83 pages of dialogue voiceover.

Market check: Go tier lands at roughly half to two-thirds Higgsfield's price for a comparable clip count at every tier checked (Higgsfield: \$19→14–24 videos, \$59→36–62, \$129→76–131) — read as pricing headroom, not proof of correctness.

Monthly subscription rate card (USD / EGP, 50% margin)

Tier	Price/mo	Price/mo (EGP)	Tokens/mo	Margin
Enterprise Standard	\$499	26,000 EGP	8,300	50%
Enterprise Pro	\$1,299	67,500 EGP	21,650	50%
Enterprise Ultimate	\$3,999	208,000 EGP	66,650	50%
Individual Standard	\$39	2,000 EGP	650	50%
Individual Pro	\$99	5,150 EGP	1,650	50%

One-time packs — Go / social (no subscription)

Pack (one-time)	Price	Price (EGP)	Clips (5-sec)	Margin
Go Starter	\$9	499 EGP	10	50%
Go Popular	\$29	1,499 EGP	32	50%
Go Value	\$79	4,099 EGP	87	50%

Key risks

- Nothing enforces this yet — no token ledger, no quota check, no provider-abstraction layer in code today.
- EGP prices are fixed while every vendor bills in USD — FX exposure on the Egyptian pound; re-peg quarterly or bill Enterprise in USD.
- Indemnification (Microsoft Foundry) covers only the Foundry-routed share of usage, not the whole plan — don't market it as blanket coverage.
- All figures assume 100% monthly redemption (the safe/floor case) — real margin will likely be higher once usage data exists.

Full detail and sourcing: **AI-PROVIDER-COSTS.md** in the CimaFast repo. Provisional model for the B5 discussion (owner + Mohamed El-Zayat) — not final pricing.
